Education

SGGS Institute of Engineering and Technology, Nanded

B.Tech in Electronics and Telecommunication

2023 – Present

4th Year

Technical Skills

Languages: JavaScript, TypeScript, Python, C++

Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, WebSockets, JWT Authentication

Databases: MongoDB, Mongoose, PostgreSQL, Prisma ORM

Tools & Platforms: Git, GitHub, Docker, CI/CD, Vercel, Clerk Auth, Inngest, Turborepo, Zod, Cloudinary

Projects

ShowTime – Full-Stack Movie Ticket Booking Application

2026

React.js, TypeScript, Node.js, Express.js, MongoDB, Clerk, Inngest, Tailwind CSS, Vercel

Live: show-time-mocha.vercel.app | GitHub: github.com/AnisJshK

- Built and deployed a full-stack movie ticket booking platform supporting browse, seat selection, and end-to-end online booking workflows, deployed to Vercel with a responsive React/TypeScript frontend.
- Integrated Clerk Authentication with Clerk Webhooks to synchronise user identity with MongoDB, enabling secure, stateless session management.
- Implemented event-driven background workflows with Inngest, including automated booking reminder emails sent to users after ticket purchase.
- Developed an Admin Dashboard with full CRUD control over movies, shows, and ticket pricing; restricted access via role-based middleware.

UrbanBasket – Full-Stack E-Commerce Platform

2026

React.js, Vite, Node.js, Express.js, MongoDB, Clerk, Inngest, Cloudinary, Tailwind CSS, Vercel

Live: urban-basket-topaz.vercel.app (client) | urban-basket-6spe.vercel.app (admin)

GitHub: github.com/AnisJshK/UrbanBasket

- Architected a three-tier e-commerce application (client, admin, server) with category filtering, cart, and a multi-step checkout offering address collection and three payment options – Stripe, Razorpay, and Cash on Delivery.
- Implemented Clerk authentication with Inngest handlers to sync user creation, updates, and deletions to MongoDB, secured by role-based admin middleware.
- Developed an admin dashboard for product management, Cloudinary-backed image uploads, and real-time order status updates (packed/shipped/out for delivery).

TaskSphere – Multi-User Task Management Backend

2025

Node.js, Express.js, MongoDB, Mongoose, JWT

GitHub: github.com/AnisJshK

- Designed and implemented a secure RESTful API backend for a multi-user task management system supporting owner and assignee roles.
- Built JWT-based authentication with middleware-protected routes enforcing task-level authorisation (owner vs. assignee permissions).
- Developed paginated CRUD endpoints with filtering and safe update mechanisms; modeled relational data with MongoDB and Mongoose using controlled population to prevent unauthorised data exposure.

Lost and Found Portal – Full-Stack Web Application

2025

Node.js, Express.js, MongoDB, Cloudinary, HTML, CSS, JavaScript

GitHub: github.com/AnisJshK

- Developed a full-stack platform for reporting and recovering lost items, with secure user authentication, RESTful APIs for item posting and retrieval, and Cloudinary-backed image storage.
- Designed a fully responsive frontend using HTML, CSS, and JavaScript with accessible UI patterns.

Achievements & Activities

- Shipped 4 full-stack web applications covering real-time systems, booking platforms, e-commerce, and CRUD backends using the MERN stack, and presented these projects in multiple academic settings.
